Good Morning Roger,

The GAC system at Loc # 601 (1672 Club Dr.) is still operational. There was a GAC system at Loc # 476 (1652 Club Dr.) that was removed in April and connected to PWS. I suspect that is the one you are thinking about. Thanks.

Kathy

Hi Kathy,

EPA is putting a letter together for the third round of GenX sampling around the Washington Works facility. We are requesting that Chemours sample only the public and private water supplies which showed detectable levels of GenX in the raw water in previous rounds of sampling. I wanted to check with you on "location 601", on Club Drive in West

Virginia. There was some indication that this residence may have been connected to the Lubeck Pubic Water Supply. If this is the case, we can remove it from the list on the attached table. Thanks.

Roger Reinhart
